Summary

I am currently working for United Nations as a Front-end developer and interested in coding for developing user interfaces on the web. Coding had been a hobby in my university years, which turned into passion driving me to enhance my knowledge about responsive web design. Since I am an attentive self-learner and flexible self-starter, I always implement and improve practical skills about programming. Swiftly responding to changing needs of an organization, quick self-learning, experience with React & Typescript, strong communication and interpersonal skills are abilities which underpin me as a software developer.

Experience

Frontend Developer

United Nations

Jul 2022 - Present (2 months +)

Front-end design of the United Nations' radar and user interface

- Developed front-end user interface by using React and Typescript
