Summary

Currently working for United Nations as a front-end developer and interested in the coding user interfaces on the web. Coding has been a hobby in my university years, which turned into passion driving me to enhance my knowledge about responsive web design. Since I am an attentive self-learner and flexible initiative-taker, I always implement practical skills in programming to solve business problems. Swiftly responding to changing needs of an organization, quick self-learning, experience with React & Typescript, strong communication and people skills are abilities which underpin me as a software developer.

Experience

Front-end Developer
United Nations

Jul 2022 - Present (4 months +)

Front-end design of the United Nations' radar and user interface.
- Developed front-end user interface by using React and Typescript.
